*(for complete addresses see page 2 of the preliminary pages)*

Review Articles, Research Papers, Comments, and Letters to the Editor on physical, chemical and structural properties of glasses, amorphous semiconductors and metals, including the liquid state, are welcome.
Manuscripts should be submitted in triplicate, typed with double line spacing, and contain a factual abstract of 200 words or less. Original figures (*to be returned after publication*) should be included.
A restricted number of short articles of special interest will be published as Letters *within three months of receipt* by the Editor.
For more information see the Instructions to Contributors on page 3 of the cover.
Manuscripts should be sent to the Editor or to one of the Regional Editors. Letters should be sent to the Editor.

It is understood that a manuscript submitted to this journal has not been published elsewhere nor is it planned for such publication. Permission to reproduce published material in a manuscript is the sole responsibility of the authors.

Correspondence with the Publisher regarding articles accepted for publication or corrections should be submitted to: Desk-editor NOC, Elsevier Science Publishers B.V. (North-Holland), P.O. Box 103, 1000 AC Amsterdam, The Netherlands (Phone 020-586 2549, telex 10704 ESP OM, FAX 020-586 2775).

JOURNAL OF NON-CRYSTALLINE SOLIDS is published in monthly issues. For 1991, 10 volumes (30 issues) have been announced. The subscription price for these volumes is Dfl.3400.00 (US $1683). Postage and handling amount to Dfl.280.00 (US $139). Therefore the total price for 1991 is Dfl.3680.00 (US $1822). The Dutch guilder price is definitive, dollar prices are for guidance only. Claims for issues not received should be made within three months of publication. If not, they cannot be honoured free of charge.

Journals are sent by surface delivery to all countries, except the following countries where SAL air delivery (Surface Airlifted Mail) is ensured: USA, Canada, Japan, Australia, New Zealand, People's Republic of China, Israel, India, Brazil, Malaysia, Singapore, South Korea, Taiwan, Pakistan, Hong Kong, South Africa. Air mail rates for other countries are available upon request.
SUBSCRIPTIONS should be sent to the Publisher, Elsevier Science Publishers B.V., Journals Department, P.O. Box 211, 1000 AE Amsterdam, The Netherlands, or to any subscription-agent or bookseller.

Elsevier Science Publishers B.V.: All rights reserved. No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the prior permission of the publisher, Elsevier Science Publishers B.V. (North-Holland Physics Publishing Division), P.O. Box 103, 1000 AC Amsterdam, The Netherlands.
*Special regulations for authors* – Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.
Submission to this journal of a paper entails the author's irrevocable and exclusive authorization of the publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of June 20, 1974 (S. 351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.

*Special regulations for readers in the U.S.A.* – This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 27 Congress Street, Salem, MA 01970, U.S.A. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1981 may be copied for a per-copy fee of US $2.25, also payable through the Center. (N.B. For review journals this fee is $0.25 per copy per page.) This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

No responsibility is assumed by the Publisher for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions or ideas contained in the material herein.

Sol–Gel Precursors 127 (1991) 105

**Chalcogenides**
Computer Simulation, Silica 123 (1990) 22
Crystallization 122 (1990) 83
Crystallization, Differential Thermal Analysis 128 (1991) 8
Crystallization, Differential Thermal Analysis 128 (1991) 269
Differential Thermal Analysis, Crystallization 128 (1991) 279
Doping, Electric Properties 130 (1991) 248
Elastic Properties 128 (1991) 294
Elastic Properties, Ultrasonic Relaxation, Viscosity, Structure 122 (1990) 205
Electron Spin Resonance, X-ray Diffraction, Density 124 (1990) 48
Electronic Conductivity, Electronic Structure, Electric Properties 127 (1991) 36
EXAFS, Structure 127 (1991) 25
Glass Formation, Hardness 130 (1991) 225
Glass Transition, Differential Thermal Analysis 127 (1991) 287
Glass Transition, Nucleation, Crystallization 126 (1990) 130
Glass Transition, Reactions 121 (1990) 7
Hardness, Structure 125 (1990) 250
Ionic Conductivity, Nuclear Magnetic Resonance 123 (1990) 328
Junctions, Photoinduced Effects 128 (1991) 1
Modelling, Glass Formation 127 (1991) 298
Neutron Diffraction, Structure, Molecular Dynamics 125 (1990) 168
Nuclear Magnetic Resonance, Structure 128 (1991) 13
Nuclear Magnetic Resonance, Structure 128 (1991) 208
Nuclear Magnetic Resonance, X-ray Absorption, Oxides, Semiconductors 123 (1990) 149
Optical Properties, Infra-red Absorption 129 (1991) 31
Photoinduced Effects 130 (1991) 85
Photoinduced Effects 130 (1991) 111
Photoinduced Effects, Crystallization 128 (1991) 216
Photoinduced Effects, Kinetics 128 (1991) 255
Photoinduced Effects, Mobility Edge, Mobility 128 (1991) 197
Radiation Effects, Mechanical Properties, Chemical Modification, Chemical Durability 130 (1991) 243
Silica, Sol–Gel Method, Electronic Structure 122 (1990) 101
Sol–Gel Method, Doping 121 (1990) 221
Structure, Raman Spectra, Differential Thermal Analysis 130 (1991) 236
Thin Films, Electron Microscopy, Structure 127 (1991) 12
Thin Films, Optical Properties, Infra-red Absorption 130 (1991) 52
Transport Properties – Solids, Thermoelectric Power 127 (1991) 19
X-ray Absorption, Photoinduced Effects, Structure 123 (1990) 295
X-ray Diffraction, Structure 126 (1990) 1

**Chalcohalides**
Infra-red Absorption, Structure 128 (1991) 191

**Chemical Durability**
Fluorides, Optical Properties, Glass Transition 128 (1991) 322
Glass Formation, Germania, Oxynitride Glasses 121 (1990) 167
Glass Formation, Thin Films, Reactions 121 (1990) 163
Halide Glasses, Glass Transition, Infra-red Absorption, Fibers, Thin Films 125 (1990) 1
Halide Glasses, Infra-red Absorption 128 (1991) 183
Metallic Glasses 125 (1990) 25
Radiation Effects, Chalcogenides, Mechanical Properties, Chemical Modification 130 (1991) 243
Surface Properties, Molecular Dynamics, Silica 122 (1990) 111
X-ray Diffraction, Tetrahedral Materials 125 (1990) 181
XPS, Phosphates, Oxynitride Glasses 126 (1990) 141

**Chemical Modification**
Radiation Effects, Chalcogenides, Mechanical Properties, Chemical Durability 130 (1991) 243
Sol–Gel Method, Thin Films, Silica, Hardness 121 (1990) 338
Sol–Gel Processes, Silica 128 (1991) 231

**Coatings**
Amorphous Solids, Metal Alkoxide, Sol–Gel Method, Thin Films, Titania 121 (1990) 310
Densification, Optical Properties, Oxides, Optical Waveguide, Sol–Gel Method 121 (1990) 323
Electronic Conductivity, Ellipsometry, Refractive Index, X-ray Diffraction 121 (1990) 68

**Colloids**
Light Scattering, Silica 121 (1990) 394

**Colloids** *(continued)*
Optical Properties 128 (1991) 109
Sol–Gel Method, Metal Alkoxide, Titania, Silica 121 (1990) 375
Sol–Gel Method, Viscosity, Oxides, Silica 121 (1990) 76

**Computer Simulation**
Chalcogenides, Silica 123 (1990) 22
Crystallization 125 (1990) 161
Glass Transition 123 (1990) 26
Mixed-alkali Effect 123 (1990) 324
Silica, Infra-red Absorption 122 (1990) 276
Structure, Microstructure 124 (1990) 22

**Crystallization**
Borates, Phase Separation, Silicates 121 (1990) 177
Chalcogenides 122 (1990) 83
Chalcogenides, Differential Thermal Analysis 128 (1991) 269
Chalcogenides, Differential Thermal Analysis 128 (1991) 279
Chalcogenides, Glass Transition, Nucleation 126 (1990) 130
Chalcogenides, Photoinduced Effects 128 (1991) 216
Computer Simulation 125 (1990) 161
Crystallization 130 (1991) 220
Densification, Glass Formation, Glass Transition, Nucleation 121 (1990) 279
Differential Thermal Analysis, Chalcogenides 128 (1991) 8
Differential Thermal Analysis, Oxides, Scanning Electron Microscopy, Sintering 121 (1990) 404
Differential Thermal Analysis, Thermal Properties 124 (1990) 63
Experimental Techniques 124 (1990) 86
Fluorides, Fibers 127 (1991) 136
Fluorides, Nucleation, Thermal Properties 129 (1991) 133
Glass Ceramics, Growth Kinetics, Microstructure 123 (1990) 114
Glass Ceramics, Silicates 129 (1991) 174
Glass Transition, Silica, Germania, Quenching 123 (1990) 90
Infra-red Absorption 121 (1990) 98
Ion Exchange, Phase Separation 127 (1991) 81
Ion Implantation, Oxides, Sputtering 123 (1990) 432
Metallic Glasses 130 (1991) 319
Metallic Glasses, Differential Thermal Analysis, X-ray Diffraction 122 (1990) 146
Metallic Glasses, Glasses Containing Transition Metal Ions, Electron Microscopy, Differential Thermal Analysis 127 (1991) 273
Metallic Glasses, Glasses Containing Transition Metal Ions, X-ray Diffraction, Differential Thermal Analysis 122 (1990) 269
Metallic Glasses, Metal–Insulator Transition 128 (1991) 162
Metallic Glasses, Metastability 130 (1991) 211
Metallic Glasses, Thermal Properties 130 (1991) 107
Metallic Glasses, X-ray Emission, Differential Thermal Analysis 127 (1991) 130
Nucleation 124 (1990) 254
Nucleation 127 (1991) 159
Nucleation, Glasses Containing Transition Metal Ions, Sol–Gel Method 121 (1990) 282
Nucleation, Surface Properties, Oxides 130 (1991) 217
Oxides, Electrochemical Properties, Silicates, Phosphates 123 (1990) 349
Oxides, Glass Transition, Glass Fibers 127 (1991) 143
Oxides, Glasses Containing Transition Metal Ions 121 (1990) 45
Oxides, Infra-red Absorption, X-ray Diffraction 121 (1990) 158
Oxides, Sol–Gel Method 121 (1990) 413
Oxides, Thermal Properties 121 (1990) 147
Phosphates, Glass Transition, Mechanical Properties 127 (1991) 75
Pressure Effects 130 (1991) 204
Raman Spectra 128 (1991) 285
Silicates, Nucleation, Glasses Containing Transition Metal Ions 126 (1990) 103
Silicates, Surface Properties 129 (1991) 183
Sol–Gel Method, Alumina 121 (1990) 329
Sol–Gel Method, Nuclear Magnetic Resonance, X-ray Diffraction 124 (1990) 91
Sol–Gel Method, Silicates, Differential Thermal Analysis 124 (1990) 145
Structure, Borates, Phosphates 129 (1991) 284
Superconductors, Oxides, Glass Transition 124 (1990) 167
Theory 127 (1991) 151
Theory, Nucleation 122 (1990) 139
Thin Films, Silicates 121 (1990) 334

**Dangling Bonds**
Infra-red Absorption, Raman Spectra, Sol–Gel Method, Defects 122 (1990) 285
Silicon Alloys, Electronic Structure 128 (1991) 133

**Defects**
Defects 128 (1991) 326
Electron Spin Resonance, Oxides, Modelling 130 (1991) 41
Glass Formation, Structure, Glass Transition 124 (1990) 34
Infra-red Absorption, Raman Spectra, Sol–Gel Method, Dangling Bonds 122 (1990) 285
Lasers, Silica, XPS 125 (1990) 107
Lasers, Structure, Density 129 (1991) 40
Optical Properties, Alloys, Silicates 123 (1990) 234
Photoinduced Effects 128 (1991) 86
Radiation Effects 128 (1991) 166
Silicates 123 (1990) 250

**Densification**
Coatings, Optical Properties, Oxides, Optical Waveguide, Sol–Gel Method 121 (1990) 323
Crystallization, Glass Formation, Glass Transition, Nucleation 121 (1990) 279
Mechanical Properties, Sintering, Topology, Silica, Sol–Gel Method 121 (1990) 132
Silica, Sintering, Sol–Gel Method, Viscosity 121 (1990) 119
Sol–Gel Method, Sintering, Amorphous Solids, Amorphization, Oxynitride Glasses, Infra-red Absorption, Silica 121 (1990) 244
Topology, Sintering, Silica, Sol–Gel Method 121 (1990) 124
Topology, Sol–Gel Method, Structure, Sintering 121 (1990) 143

**Density**
Defects, Lasers, Structure 129 (1991) 40
Elastic Properties, Sol–Gel Method 121 (1990) 202
Electron Spin Resonance, X-ray Diffraction, Chalcogenides 124 (1990) 48
Metallic Glasses, X-ray Diffraction, Glasses Containing Transition Metal Ions 122 (1990) 45
Neutron Diffraction, Borates, Structure, Glass Transition 122 (1990) 33
Pressure Effects, Luminescence 130 (1991) 78

**Dielectric Properties**
Borates, Electrical Properties and Relaxation 122 (1990) 197
Borates, Electrical Properties and Relaxation 122 (1990) 305
Mixed-alkali Effect, Modelling, Thermal Properties 128 (1991) 48
Phase Separation, Thermodynamics 123 (1990) 197
Sol–Gel Method, Thin Films, Thermal Properties 121 (1990) 428
Thermal Properties, Silicates, Sol–Gel Method 121 (1990) 463

**Differential Thermal Analysis**
Chalcogenides, Crystallization 128 (1991) 279
Chalcogenides, Structure, Raman Spectra 130 (1991) 236
Crystallization, Chalcogenides 128 (1991) 8
Crystallization, Chalcogenides 128 (1991) 269
Crystallization, Oxides, Scanning Electron Microscopy, Sintering 121 (1990) 404
Crystallization, Thermal Properties 124 (1990) 63
Glass Formation, Glass Transition, Thermoelectric Power 130 (1991) 58
Glass Transition, Chalcogenides 127 (1991) 287
Infra-red Absorption, Sol–Gel Method 121 (1990) 182
Metallic Glasses, Crystallization, Glasses Containing Transition Metal Ions, X-ray Diffraction 122 (1990) 269
Metallic Glasses, Crystallization, X-ray Diffraction 122 (1990) 146
Metallic Glasses, Crystallization, X-ray Emission 127 (1991) 130
Metallic Glasses, Glasses Containing Transition Metal Ions, Crystallization, Electron Microscopy 127 (1991) 273
Metallic Glasses, X-ray Diffraction, Structure 124 (1990) 121
Sol–Gel Method, Silicates, Crystallization 124 (1990) 145
Superconductors, Doping, Experimental Techniques, Electrical Properties 121 (1990) 448
Thermal Properties, Glass Transition 130 (1991) 198
Viscosity, Electrical Properties and Relaxation 124 (1990) 229

**Diffusion**
Experimental Techniques 125 (1990) 280
Ion Exchange, Refractive Index 123 (1990) 315
Rutherford Backscattering, Photoinduced Effects 124 (1990) 186
Silica 124 (1990) 181
Sol–Gel Method, Drying Control Additive, Reactions 122 (1990) 291
Structure 126 (1990) 249
Theory, Silica 124 (1990) 174

**Doping**
Applications, Organic–Inorganic Hybrids, Silica, Sol–Gel Method 121 (1990) 136
Chalcogenides, Electric Properties 130 (1991) 248
Fibers, Lasers, Glass Formation 129 (1991) 93
Field Effect 130 (1991) 256
Lasers, Silica, Silicates, Sol–Gel Method 121 (1990) 267
Oxynitride Glasses 127 (1991) 165
Sol–Gel Method, Chalcogenides 121 (1990) 221
Sol–Gel Method, Optical Properties, Lasers 128 (1991) 69
Sol–Gel Method, Silica, Reactions 122 (1990) 107
Superconductors, Differential Thermal Analysis, Experimental Techniques, Electrical Properties 121 (1990) 448

**Drying**
Aerogels, Oxides, Silica, Sol–Gel Method 121 (1990) 66

**Drying Control Additive**
Sol–Gel Method, Diffusion, Reactions 122 (1990) 291

**Elastic Properties**
Chalcogenides 128 (1991) 294
Chalcogenides, Ultrasonic Relaxation, Viscosity, Structure 122 (1990) 205
Glass Ceramics, Silicates, Fracture 129 (1991) 163
Phase Separation, Theory 125 (1990) 129
Relaxation, Light Scattering 122 (1990) 160
Sol–Gel Method, Density 121 (1990) 202

**Elastic Properties** *(continued)*
Sol–Gel Method, Thin Films, Mechanical Properties 121 (1990) 348
Sol–Gel Processes, Thermal Properties, Mechanical Properties 130 (1991) 157
Structure 126 (1990) 161
Ultrasonic Relaxation, Borates, Structure 127 (1991) 65
Viscosity, Theory 129 (1991) 276

**Electric Properties**
Chalcogenides, Doping 130 (1991) 248
Chalcogenides, Electronic Conductivity, Electronic Structure 127 (1991) 36

**Electrical Properties**
Liquids, Electrochemical Properties, Oxides 127 (1991) 197
Semiconductors, Photoinduced Effects, Electron–Lattice Interactions 128 (1991) 243
Superconductors, Differential Thermal Analysis, Doping, Experimental Techniques 121 (1990) 448

**Electrical Properties and Relaxation**
Borates, Dielectric Properties 122 (1990) 197
Borates, Dielectric Properties 122 (1990) 305
Differential Thermal Analysis, Viscosity 124 (1990) 229
Glass Formation, Optical Properties 123 (1990) 285
Nuclear Magnetic Resonance, Oxides 128 (1991) 328
Semiconductors, Electronic Structure 122 (1990) 312

**Electrochemical Properties**
Injection of Carriers, Thin Films, Transport Properties – Devices 121 (1990) 319
Liquids, Electrical Properties, Oxides 127 (1991) 197
Oxides, Crystallization, Silicates, Phosphates 123 (1990) 349
Silicates, Glasses Containing Transition Metal Ions 128 (1991) 154
Structure, Silicates 129 (1991) 233

**Electron Interactions**
Metal–Insulator Transition, Electron–Lattice Interactions 130 (1991) 110
Semiconductors, Optical Properties, Electron Spin Resonance, Infra-red Absorption 128 (1991) 172
Silicon Alloys, Optical Properties, Electronic Structure 128 (1991) 139

**Electron–Lattice Interactions**
Electronic Conductivity, Oxides, Sol–Gel Method 121 (1990) 35
Fluorescence Spectra, Oxides, Absorption 122 (1990) 79
Metal–Insulator Transition, Electron Interactions 130 (1991) 110
Metallic Glasses, Quasicrystals, Theory 127 (1991) 121
Semiconductors, Photoinduced Effects, Electrical Properties 128 (1991) 243

**Electron Microscopy**
Ion Implantation, Semiconductors, Neutron Diffraction 125 (1990) 258
Metallic Glasses, Glasses Containing Transition Metal Ions, Crystallization, Differential Thermal Analysis 127 (1991) 273
Metallic Glasses, Ion Implantation, Glasses Containing Transition Metal Ions 124 (1990) 131
Raman Spectra, Sol–Gel Method 121 (1990) 128
Sol–Gel Method, Structure, Titania 125 (1990) 50
Thin Films, Chalcogenides, Structure 127 (1991) 12
Thin Films, Lasers, Oxides, XPS, X-ray Emission 129 (1991) 117

**Electron Spin Resonance**
Defects, Oxides, Modelling 130 (1991) 41
Glasses Containing Transition Metal Ions, Bonding 122 (1990) 74
Glasses Containing Transition Metal Ions, Borates 124 (1990) 216
Glasses Containing Transition Metal Ions, Fluorides 125 (1990) 32
Halide Glasses, Glasses Containing Transition Metal Ions, Structure 125 (1990) 17
Oxides, Optical Properties, Glasses Containing Transition Metal Ions 124 (1990) 265
Radiation Effects 126 (1990) 173
Semiconductors, Optical Properties, Electron Interactions, Infra-red Absorption 128 (1991) 172
Semiconductors, Silicon Alloys, Solar Cells 127 (1991) 186
Silicates, Short-Range Order 129 (1991) 249
Sol–Gel Method, Glasses Containing Transition Metal Ions, Optical Properties 122 (1990) 183
X-ray Diffraction, Density, Chalcogenides 124 (1990) 48

**Electronic Conductivity**
Borates, Mixed-alkali Effect 125 (1990) 302
Chalcogenides, Electronic Structure, Electric Properties 127 (1991) 36
Coatings, Ellipsometry, Refractive Index, X-ray Diffraction 121 (1990) 68
Electron–Lattice Interactions, Oxides, Sol–Gel Method 121 (1990) 35
Fluorides, Superconductors 121 (1990) 417
Germanates, Phosphates, Optical Properties, Infra-red Absorption 123 (1990) 339
Glasses Containing Transition Metal Ions, Optical Properties, Infra-red Absorption 126 (1990) 194
Oxides, Sol–Gel Method, Thin Films 121 (1990) 365
Phosphates 124 (1990) 221

**Electronic Conductivity** *(continued)*
Phosphates, Glasses Containing Transition Metal Ions 124 (1990) 71
Semiconductors, Glasses Containing Transition Metal Ions 125 (1990) 264
Semiconductors, Thin Films, Electronic Structure 122 (1990) 193
XPS, Structure 128 (1991) 18

**Electronic Structure**

# TITLES IN CONDENSED MATTER PHYSICS

***The following titles are volumes in the series Modern Problems in Condensed Matter Sciences. The series editors are V.M. Agranovich and A.A. Maradudin.***

## Helium Three

W.P. Halperin and
L.P. Pitaevskii *(editors)*

(Volume 26)

1990 xiv + 950 pages
US $271.50/Dfl.475.00
ISBN 0-444-87476-3

One of the most interesting topics in many-body physics today is the study of quantum fluids. This book deals with both theoretical and experimental aspects of superfluid helium three and spin polarized helium three. Relationships between properties of helium three and topics in other fields are established including superconductivity, non-linear dynamics, acoustics, and magnetically polarized quantum systems.

## Landau Level Spectroscopy

G. Landwehr and E.I. Rashba
*(editors)*

(Volume 27, in 2 parts)

1991 cxx + 1406 pages (in 2 parts)
Part I: US $283.75/Dfl.495.00
ISBN 0-444-88535-8
Part II: US $283.75/Dfl.495.00
ISBN 0-444-88873-X
Set: US $511.50/Dfl.895.00
ISBN 0-444-88874-8

This set of books is unique because it covers the most important electronic properties of solids in strong magnetic fields, including inter- and intraband optical spectroscopy and transport phenomena. It focuses on fundamental problems in Landau level spectroscopy, but special attention is paid to the phenomena important for applications in electronics such as spectroscopy of two-dimensional electrons, spin-flip Raman scattering and light emission by hot carriers.

## Hopping Transport in Solids

M. Pollak and B. Shklovskii
*(editors)*

(Volume 28)

1991 xiv + 452 pages
US $200.00/Dfl.350.00
ISBN 0-444-88037-2

The rapid growth of interest in hopping transport has followed in the footsteps of the development of physics of disordered systems during the last three decades. The intense interest in disordered solids can be attributed to the technological potential of the new noncrystalline materials, as well as to new fundamental problems discovered in solid state physics when a crystal is no longer translationally symmetric.

In the last decade hopping systems such as organic polymers, biological materials, many oxide glasses, mesoscopic systems, and the new high-temperature superconducting materials in their normal state have attracted much interest. New phenomena investigated recently include interference and coherent scattering in variable range hopping conduction, mesoscopic effects, relaxation processes and thermo-electric power, and thermal conductivity caused by hopping transport. This volume presents the reader with a thorough overview of these recent developments, written by leading experts in the various fields

## Mesoscopic Phenomena in Solids

B.L. Altshuler, P.A. Lee and
R. Webb *(editors)*

(Volume 30)

1991 about 600 pages
US $ 243.00/Dfl. 425.00
ISBN 0-444-88454-8

The physics of disordered systems has enjoyed a resurgence of interest in the last decade. New concepts such as weak localization, interaction effects and Coulomb gap, have been developed for the transport properties of metals and insulators. With the fabrication of smaller and smaller samples and the routine availability of low temperatures, new physics has emerged from the studies of small devices. The new field goes under the name "mesoscopic physics" and has rapidly developed, both experimentally and theoretically. This book is designed to review the current status of the field.

# Journal of ALLOYS AND COMPOUNDS

**24 Issues per year**

Formerly: Journal of the Less-Common Metals

**An Interdisciplinary Journal of Materials Science and Solid-State Chemistry and Physics**

**For:**

**Chemists, physicists, metallurgists and materials scientists**

**Editor-In-Chief**
**Ch. J. Raub**
Schwäbisch Gmünd, F.R.G.

**Editors**
**K.H.J. Buschow**
*Eindhoven, The Netherlands*

**H.F. Franzen**
*Ames, IA, U.S.A.*

## Aims and Scope

The aim of the *Journal of Alloys and Compounds* is identical to the journal's aim under its previous title: *Journal of the Less-Common Metals.* The journal was originally intended to serve as an international medium for the publication of work on the physical sciences of usually called less-common metals, their compounds and their alloys. Its great strength lies in the diversity of discipline which it encompasses, drawing together results from materials science, solid-state chemistry and physics. The interdisciplinary nature of the journal is evident in many subject areas. Experimental and theoretical approaches to materials problems require an active interplay between a variety of traditional and novel scientific disciplines. In much of the work published in the journal, synthetic and structural studies are combined with investigations of chemical and physical properties of alloys and compounds, contributing to the development of areas of current scientific interest. The *Journal of Alloys and Compounds* provides a unique international forum where materials scientists, chemists and physicists can present their results both to workers in their own fields and to others active in related areas.

# Instructions to Contributors

Original manuscripts may be submitted to the editor or any one of the regional editors. The author or authors must confirm that:

(1) the manuscript has not been published and is not being submitted to any other journal. If presented at a conference, the conference must be identified. If published in conference proceedings, substantial justification for re-publication must be presented.

(2) all necessary permissions for publication have been secured prior to submission.

(3) all authors have made a significant contribution to the research reported and have read and approved the manuscript which has been submitted. All authors take full responsibility for the published paper.

A manuscript submitted to the Journal will have the following structure.

(i) **Abstract.** A brief reprise of the contents of the manuscript, containing specific results and conclusions.

(ii) **Introduction.** Justifications for the research, hypotheses to be tested by the experiments or theory, and a review of the literature relevant to be reported.

(iii) **Experimental Procedures or Constraints on Theory.** Information necessary for the reader to understand the significance of the data which will be presented in the Results section must be given, e.g. sample preparations, compositions, etc. Errors of measurement, random and systematic, should be described and the methods by which their values were determined given. A description of the limits of a theory or of modelling may be given.

(iv) **Results.** Data. Errors in experimental data must be given with the data. The basis for all lines drawn on a figure must be described, either in the text or in the figure caption. If significant maxima or minima occur in a spectrum and these are identified, the method by which the values of the peak positions were measured and the errors of the measurements must be given.

(v) **Discussion.** Development of the data's logical relations, relevance to prior research, and deductions from the data and prior research. If lines drawn on a figure are curves of some function fitted to the data then the method of fitting and the quality of the fit must be given. The use of such phrases as "data may show...", "data probably indicates...", "it may be that...", and other such indicators of unsupported speculation are strongly discouraged.

(vi) **Conclusions**. Brief declarative sentences that state unequivocally the conclusions of the research. Extended repetition of the discussion is inappropriate.

Three copies of a manuscript must be submitted with original figures. **The manuscript must be typed with double spaces between lines.** Sections and sub-sections must be clearly numbered according to the Journal style. Line drawings should be drawn with India ink or a laster printer. The ordinate and abscissa must be labelled and units given for the scales. Letters and numbers must be 2 mm in height after reduction. Halftones, such as electron micrographs, must be submitted as high-quality prints or originals, and the top edge should be indicated on the back. Scale bars are preferable. Figure captions will be listed separately from the figures. *Note:* Original figures will be returned after publication. References will be numbered sequentially and should be prepared according to the style requirements of the Journal (see past issues for examples of references of various types of publication). References should be listed at the end of the paper, after any appendices. On first use, all acronyms to be subsequently used will be spelled out, e.g. transmission electron microscopy (TEM). Acronyms will not be used in an abstract. Tables must be typed with double spacing on separate pages, have a brief descriptive title, and every column must have a title with units given in parentheses. Units must not change in a column. Tables will be numbered sequentially in the sequence of their appearance in the text.

Authors are requested to follow the recommendations of the Symbols and Units Nomenclature Commission of the I.U.P.A.P. (Physica 146A (1987) 1–68). Symbols of scalar quantities are printed in italics. Vectors are printed in bold italic type; these should be indicated in the manuscript by wavy underlining in the text and in formulae. Tensors are printed in bold sans serif type.

Contributed manuscripts will, in most cases, be reviewed by two referees. The comments of the referees and the recommendations of the editor and the decision on publication will be sent to the corresponding author.

COMMENTS. Comments on published papers are welcomed and should be titled "Comment on (title of paper)". Authors will be given the opportunity to respond, and their response will be published with the "Comment...".

LETTERS. A Letter will have, nominally, 1000 words and three line drawings prepared in the same format as a contributed manuscript. A brief abstract is required. The structure of a Letter will be the same as that described above, except that section headings may be elided. Authors who wish to have letters considered for rapid publication must provide justification for such treatment. Letters judged by the editor to contain such justification will be reviewed by one referee within one week of receipt. The objective of the rapid procedure is to publish the Letter within approximately three months of receipt. Letters may be submitted by facsimile transmission to the editor. The original manuscript and line drawings for such letters may be submitted directly to the publisher.

REVIEW PAPERS. The editor will solict reviews in topics judged to be of current interest. Suggestions for topics by our readers and those who wish to prepare a review are welcomed. The editor will acknowledge all suggestions.

REPRINTS. Twenty-five (25) reprints of a paper will be sent to the first author without charge. An order form for additional reprints will be sent with the author's proofs. The order for additional reprints must be returned with the corrected proofs.

Announcing
The PROCEEDINGS of the

# *Seventh CIMTEC World Ceramics Congress*

Montecatini Terme, Italy, 24 June - 5 July, 1990

**Ceramics Today - Tomorrow's Ceramics**
Proceedings of the Main Congress, 7th CIMTEC World Ceramics Congress, Montecatini Terme, Italy, 24-30 June, 1990
*edited by* **P. Vincenzini**
*Materials Science Monographs Volume 66*
1991 xxxviii + 3300 pages (in 4 Vols.)
Price: US $ 914.00 / Dfl. 1600.00
ISBN 0-444-88365-7

**High Performance Ceramic Films and Coatings**
Proceedings of Satellite Symposium 1, 7th CIMTEC World Ceramics Congress, Montecatini Terme, Italy, 27-30 June, 1990
*edited by* **P. Vincenzini**
*Materials Science Monographs Volume 67*
1991 xiv + 756 pages
Price: US $ 245.50 / Dfl. 430.00
ISBN 0-444-89058-0

**Advanced Structural Inorganic Composites**
Proceedings of Satellite Symposium 2, 7th CIMTEC World Ceramics Congress, Montecatini Terme, Italy, 27-30 June, 1990
*edited by* **P. Vincenzini**
*Materials Science Monographs Volume 68*
1991 xvi + 826 pages
Price: US $ 257.00 / Dfl. 450.00
ISBN 0-444-89059-9

**Ceramics in Substitutive and Reconstructive Surgery**
Proceedings of Satellite Symposium 3, 7th CIMTEC World Ceramics Congress, Montecatini Terme, Italy, 27-30 June, 1990
*edited by* **P. Vincenzini**
*Materials Science Monographs Volume 69*
1991 xiv + 646 pages
Price: US $ 231.50 / Dfl. 405.00
ISBN 0-444-89060-2

**High Temperature Superconductors**
Proceedings of Satellite Symposium 4, 7th CIMTEC World Ceramics Congress, Trieste, Italy, 2-5 July 1990
*edited by* **P. Vincenzini**
*Materials Science Monographs Volume 70*
1991 xviii + 996 pages
Price: US $ 291.50 / Dfl. 510.00
ISBN 0-444-89061-0

Please contact the publisher for a descriptive brochure on the complete proceedings.
